

Wind Turbine Generator

This generator converts wind energy into electrical power. It is suitable for renewable energy generation in various settings.

Product Overview

Industrial Wind Turbine Generator

This industrial-grade wind turbine generator is engineered for large-scale energy production in wind farm environments. Designed with a robust three-blade rotor system, the unit prioritizes aerodynamic efficiency and high-capacity power generation. Its architectural design allows for comprehensive maintenance and installation access, ensuring long-term operational reliability for utility-scale energy projects.

Technical Specifications

Rotor Configuration	Three-blade horizontal axis
Key Components	Nacelle, Rotor Blades, Tower

Installation & Maintenance

Maintenance Compatibility
Crane Accessible • Field Serviceable
