

Window Assembly with Thermal Insulation

This window assembly features a pane of glass, an aluminum alloy spacer, and chemical sealant. Its design minimizes heat loss and gain, contributing to energy conservation.

Product Overview

High-Efficiency Thermal Insulation Window Assembly

This advanced window assembly is engineered to provide superior thermal performance and energy efficiency. Featuring a precision-designed construction, it utilizes high-quality materials to minimize heat transfer, effectively reducing heat loss in winter and heat gain in summer. This assembly is ideal for projects prioritizing sustainable building practices and climate control.

Construction & Materials

Key Components

- Insulated Glass Pane
- Aluminum Alloy Spacer
- Chemical Sealant

Spacer Material	Aluminum Alloy
-----------------	----------------

Performance Metrics

Thermal Performance

1 High Solar Radiation Reflection	1 Optimized Heat Loss Reduction
