

Windshield Wiper Linkage Assembly

This windshield wiper linkage assembly transfers motion from the wiper motor to the wiper arms, synchronizing movement across the windshield. Its durable construction ensures reliable performance and resistance to wear.

Product Overview

High-Performance Wiper Linkage Assembly

This windshield wiper linkage assembly is engineered to provide precise motion transfer from the wiper motor to the wiper arms, ensuring synchronized and efficient windshield clearing. Constructed with durable metal rods and precision-engineered pivot points, this component is designed for long-term reliability and smooth operation. It is an essential solution for maintaining optimal visibility during inclement weather conditions, built to withstand daily wear and tear.

Technical Specifications

Key Performance Features

- Synchronized movement
- Smooth operation
- Extended lifespan
- Wear and tear resistance

Operational Benefit

Optimal Visibility • Consistent Clearing

Primary Function

Transfers motion from wiper motor to wiper arms

Construction Materials

Metal Rods, Lubricated Joints
