

Wine Dispenser with Argon Preservation System

This wine dispenser utilizes an argon gas system to preserve the quality of open wine bottles. By displacing oxygen, it effectively prevents oxidation and maintains the wine's original flavor profile.

Product Overview

Professional Wine Preservation

This wine dispenser utilizes an advanced argon gas preservation system to effectively displace oxygen from opened wine bottles. By preventing oxidation, it ensures that the flavor and aroma of the wine are maintained over multiple servings. Designed for both home and commercial environments, the system features a robust metallic regulator with an integrated pressure gauge for precise control and convenience.

Technical Specifications

Included Components

- Pressure regulator
- Pressure gauge
- Argon gas cartridge

Gas Type	Argon (Ar)
----------	------------

Construction Material	Metallic
-----------------------	----------

Key Features

Key Benefits

Prevents Oxidation • Preserves Flavor • Preserves Aroma • Easy Cartridge Replacement

Application Suitability	Home Use, Commercial Use
-------------------------	--------------------------
