

Wine Dispenser with Chilling System

This wine dispenser is a compact refrigeration unit designed for dispensing chilled wine. It features a cylindrical transparent reservoir and an integrated cooling system with a dispensing tap and removable drip tray.

Product Overview

Professional Wine Dispensing Solution

This compact wine dispenser is engineered for high-efficiency chilling and precise serving in both home and commercial environments. The unit features a transparent cylindrical reservoir that offers clear visibility of the remaining wine levels, ensuring seamless operation during busy service periods. With its integrated cooling system and durable heat-dissipating enclosure, it maintains optimal temperatures for serving chilled wine effortlessly.

Design and Build

Key Design Features

- Compact countertop footprint
- Transparent cylindrical reservoir
- Integrated cooling system
- Textured heat-dissipation enclosure
- Removable drip tray for easy maintenance

Certifications and Compliance

Intellectual Property

Utility Model Patent, Design Patent, State Intellectual Property Office Certified

Usage

Best For

Home Use • Commercial Settings • Countertop Operation
