

Wire Rod Straightening and Cutting Machine

This machine is designed for straightening and cutting wire rods. It delivers precise length control and efficient operation.

Product Overview

Industrial Wire Rod Processing

This specialized wire rod straightening and cutting machine is designed for high-precision metal processing applications. Built on a foundation of proven innovation, the system offers world-class performance and reliability for industrial steel bar finishing. It serves as an essential solution for facilities requiring consistent straightening and accurate cutting of steel rods.

Technical Specifications

Available Centerless Lathe Models

- BP-80
- BP-40
- BP-150
- WC-250

Available Straightening Calender Models

- JP-15
- JP-50
- JP-80
- JP-150
