

Wire Rope Production Line

This equipment is designed for the automated production of wire rope. It features spool winding stations, tensioning mechanisms, and wire guides for precise wire placement.

Overview

Industrial Wire Rope Manufacturing Solution

This comprehensive wire rope production line is engineered for high-volume, continuous manufacturing operations. The system integrates precise wire drawing, advanced stranding technologies, and robust closing mechanisms to ensure superior quality and structural integrity. Designed for heavy-duty industrial environments, it provides reliable performance and safety-focused operation for professional wire rope production.

Operational Status

Industrial Grade • Continuous Duty

Manufacturing Equipment

Primary Machinery Components

- Wire rope drawing machine
- CGB bow strander
- Jly basket strander
- JGG large bearing tube strander
- Closing, paying off rack and traction device

Key Technical Features

Continuous Operation, High-Volume Output, Safety Enclosures, Tensioning Mechanisms, Precision Drawing Dies
