

Wire Rope Unwinding and Rewinding Machine

This machine includes a counting meter and adjustable distance between the front and rear wheels. It features a speed regulation device for convenient control of setting and wrapping speeds.

Product Overview

Industrial Wire Rope Handling Solution

This specialized machine is engineered for the efficient unwinding and re-wrapping of heavy-duty wire rope in industrial settings like construction and mining. It features advanced speed regulation and a precision counting-meter device to ensure operational accuracy and ease of use. The adjustable design allows for flexible spacing between the front and rear wheels, providing a versatile solution for various spool sizes and workflow requirements.

Key Features

Core Functionalities

- Integrated counting-meter device for length tracking
- Adjustable distance between front and rear wheels
- Variable speed regulation for controlled unwinding and wrapping
- Heavy-duty construction for industrial reliability

Technical Specifications

Operational Metrics

5 t

Standard Capacity Options

Load Capacity Options

5t, 8t, 10t
