

Wired and Wireless Camera Monitor System

This system includes cameras and monitors with both wired and wireless capabilities. The cameras are CCD/CMOS type and the monitors are CRT and LCD.

Product Overview

Versatile Surveillance and Monitoring

This camera and monitor system offers flexible connectivity options, supporting both wired and wireless setups for diverse operational needs. Equipped with high-quality CCD/CMOS sensors, the system provides reliable color or black and white video output. Designed for durability and performance, it is suitable for applications ranging from high-security CCTV surveillance to rear-view reversing and residential baby monitoring.

Technical Specifications

Sensor Technology	CCD, CMOS
Connectivity	Wired, Wireless
Display Types	CRT, LCD
Imaging Modes	Color, Black & White

Applications

Industry Applications

- CCTV Security Systems
- Rear-view Reversing Systems
- Baby Monitors
