

Wireless Anti-Tampering System with International Patent

This system is a wireless anti-tampering solution with an international patent. It prevents tampering and ensures accurate measurement and control in critical infrastructure applications.

Product Overview

Advanced Anti-Tampering Protection

This wireless anti-tampering system is engineered to secure critical infrastructure and ensure precise measurement accuracy. Featuring international patent protection, the solution integrates advanced network capabilities to prevent unauthorized interference. It is designed for diverse applications, including load control and multi-function watt-hour metering, providing reliable performance in demanding environments.

Technical Features

Available System Configurations

- Wireless Anti-Tampering System
- Load Control Anti-Tampering System
- Multi-function Watt-hour Meter Anti-Tampering Network

Connectivity

Wireless Enabled • Network Integrated

Compliance & Patents

International Patent, Anti-Tampering Certified
