

Wireless Gooseneck Microphone System

This wireless gooseneck microphone system is designed for use in conference rooms and meeting halls. It includes a receiver and gooseneck microphones for clear audio transmission.

Overview

Professional Wireless Gooseneck System

The PU-4677 is a professional-grade wireless gooseneck microphone system designed for high-clarity audio in conference rooms and meeting halls. It features a reliable UHF frequency range of 600-900MHz to ensure stable connectivity and minimal interference during critical sessions. With a 60-meter working distance and up to 10 hours of battery life, it provides the flexibility and endurance required for extended professional use.
