

# Wireless Parking Traffic Sensor with Digital Detection

Wireless parking traffic system enhances vehicle proximity detection. Digital sensors provide accurate distance measurements, and a speaker emits audible alerts.

## Product Overview

### Advanced Wireless Parking Traffic System

The Wireless Parking Traffic System (PTS) is an advanced vehicle proximity detection solution designed for accurate distance measurement and enhanced traffic control. Utilizing high-precision digital sensors and a responsive speaker unit, it provides real-time audible alerts to improve parking safety. Its wireless architecture simplifies the installation process and significantly reduces wiring complexity for facility managers.

## Key Features

### Included Components

- Control Unit
- Digital Proximity Sensors
- Audio Speaker Unit
- Wiring Harnesses

## System Capabilities

### Installation Characteristics

Reduced Wiring Complexity • Simplified Setup

### Detection Technology

Digital Sensing, Wireless Communication, Audible Alerting
