

Wireless Radio Communication System

This system allows wireless communication between a television and a radio device. It enhances multimedia capabilities with data transfer.

Overview

Professional Wireless Communication System

This advanced wireless radio communication system is designed for high-performance multimedia integration and reliable signal transmission. It features specialized hardware capable of seamless data transfer between devices, making it suitable for modern professional setups. With its robust antenna technology and multimedia-ready interface, it provides a versatile solution for wireless communication requirements in various environments.

Technical Specifications

Supported Display Sizes	15", 19", 20", 22"
Connection Method	Wireless Radio Frequency
Transmission Capability	Yes
