

Wireless Remote Control System for Industrial Machinery

This system provides remote operation of machinery in industrial settings. It includes a receiver and two handheld remote transmitters.

Overview

Industrial Wireless Control Solution

This wireless remote control system is engineered specifically for industrial machinery and demanding operational environments. The package includes a robust receiver unit equipped with multiple output ports for versatile connectivity, alongside two handheld transmitters for reliable remote operation. Designed for seamless integration, this system provides a dependable solution for enhancing safety and efficiency in industrial workflows.

System Components

Included Components

- 1 x Receiver unit
- 2 x Handheld remote transmitters

Receiver Capabilities

Multiple output ports, Industrial design, Easy integration

Application

Primary Use Case

Industrial machinery remote operation and control
