

Wireless Temperature Transmitter with Digital Display

This temperature transmitter features isolated adjustable zeroing and span capabilities. It offers battery power supply with a display and wireless signal output.

Product Overview

Professional Wireless Temperature Monitoring

The AXW series temperature transmitter utilizes advanced micro-machined silicon sensor technology to provide accurate and reliable readings in demanding industrial environments. Engineered for efficiency, this compact device incorporates micro-power technology and features a clear digital display for real-time monitoring. Its robust design ensures excellent environmental adaptability, while integrated remote communication capabilities and on-site adjustment buttons offer maximum flexibility for maintenance and operation.

Technical Features

Sensor Technology	Micro-machined silicon
Power Design	Micro-power technology
Communication	Remote Communication

Physical Attributes

Design Characteristics

- Compact form factor
- Lightweight construction
- High environmental adaptability

Display Type	Digital
--------------	---------

Maintenance

Adjustment Controls

- Internal zero adjustment
- Span adjustment button

Calibration Features	Yes
