

Wood Planer for Smoothing and Thickness Reduction

This planer is a woodworking machine used to smooth and reduce the thickness of wood. It is designed for achieving consistent and accurate planing results in woodworking applications.

Overview

Professional Wood Planing Solution

This 13-inch benchtop planer is designed for woodworking professionals seeking consistent and accurate thickness reduction. Featuring a robust construction with precise depth adjustment controls, it ensures smooth, uniform surfaces for all your timber projects. Engineered for reliability, this machine combines a high-speed cutterhead with an intuitive feed system to deliver excellent results in demanding workshop environments.

Technical Specifications

Cutterhead Speed

9000 RPM

Cutterhead Speed

Input Voltage	220V
Frequency	60 Hz
Rated Power	1250 W
Planing Width	13 inch

Features

Machine Features

- Precision depth adjustment scale
- Manual crank handle for thickness control
- Integrated safety switch
- Feed and outfeed table system

Model Number

MQ3101
