

Wood Splitting Maul with Composite Handle

This wood splitting maul is designed for efficiently splitting wood. It features a broad head and a long, durable composite handle for increased leverage.

Product Overview

Heavy-Duty Wood Splitting Performance

This wood splitting maul is engineered for demanding forestry and landscaping tasks. Featuring a specialized broad, flat head, it is optimized to create wide splits in logs with maximum leverage. The durable composite handle ensures a balance of strength and shock absorption, making it a reliable choice for professional wood splitting operations.

Technical Specifications

Handle Material	Composite
Tool Type	Splitting Maul
Blade Characteristics	Broad Head, Wide Profile, High Leverage

Features

Key Features

- Optimized for heavy-duty splitting
- Ergonomic composite handle construction
- High-leverage head attachment
- Durable, shock-absorbing design
