

# Wood Thickness Planer for Woodworking

The woodworking thickness planer is designed for accurately planing wood to a consistent thickness. It features a robust frame, adjustable planing height, and a feed mechanism for smooth material processing.

## Overview

### Professional Thickness Planer

The MB105B single-surface thickness planer is a professional-grade woodworking machine designed to deliver precise and uniform thickness for lumber. It features a robust, heavy-duty frame that ensures stability during operation and minimizes vibration. With its efficient feed mechanism and adjustable planing height, it provides consistent results, making it an essential tool for professional woodworking shops requiring accuracy and reliability.

## Key Features

### Model Identifier

MB105B

### Design Highlights

Single-surface planing, Heavy-duty construction, Adjustable height, Automatic feed system

## Performance

### Target Use

- Professional woodworking workshops
- High-precision cabinetry
- Demanding woodworking projects
