

Woodworking Back Saw with Rigid Spine

This back saw features a thin blade and a rigid spine for stability. It is used for accurate, straight cuts in joinery and woodworking.

Product Overview

Precision Woodworking Back Saw

This specialized back saw is engineered for high-precision joinery and fine woodworking tasks. Featuring a thin, stable blade reinforced by a rigid steel or brass spine, it prevents buckling and ensures straight, accurate cuts every time. Designed for professional use in creating dovetails, miters, and tenons, it offers the control and stability required for complex woodworking projects.

Technical Specifications

Model Number	DT1901A
Blade Type	Thin blade with rigid spine
Spine Material	Steel, Brass

Key Features

Primary Applications

- Dovetail cutting
- Miter cutting
- Tenon cutting
- General joinery

Performance Benefits
