

Woven Brake Lining with Resin

Woven brake linings are available in both asbestos and non-asbestos materials. The durable weave is impregnated with resin to improve performance and extend the service life.

Product Overview

High-Performance Woven Brake Lining

These woven brake linings are engineered with a durable weave and impregnated with high-grade resin to deliver enhanced performance and long-lasting durability. Designed for both industrial and automotive applications, they provide reliable and consistent braking efficiency even in demanding environments. The specialized resin treatment ensures superior wear resistance and optimized frictional properties for critical braking systems.

Material Composition

Available Materials	Asbestos, Non-Asbestos
---------------------	------------------------

Performance Features

Key Characteristics

- Resin-impregnated for enhanced friction
- Durable woven construction
- High wear resistance
- Consistent braking performance
- Suitable for industrial and automotive use

Applications

Primary Applications

Industrial Machinery • Automotive Braking Systems • Heavy-Duty Equipment
