

Yagi-Uda TV Antenna

This Yagi-Uda antenna is designed for television reception. It features a multi-element array and is optimized for signal gain and directivity.

Product Overview

High-Performance TV Reception

This Yagi-Uda TV antenna is engineered for superior television signal reception, utilizing a multi-element array to achieve excellent gain and directivity. Constructed with durable metal components, the unit is built to withstand outdoor environments while maintaining signal integrity. It includes an integrated matching network to ensure optimal impedance matching and efficient signal transfer for both VHF and UHF frequencies.

Technical Specifications

Installation Type

Outdoor

Signal Coverage

VHF, UHF

Material Composition

Durable metal components

Design Components

Structural Elements

- Driven element
- Reflector
- Multiple directors
- Matching network
