

# Yagi-Uda TV Antenna

This Yagi-Uda antenna is designed for receiving television signals. It features parallel dipole elements, including a driven element, reflector, and multiple directors, and is constructed from metal rods.

## Product Overview

### Professional Yagi-Uda TV Antenna

This high-performance Yagi-Uda antenna is engineered for reliable reception of both VHF and UHF television signals. Constructed from durable metal rods with a central support boom, it is designed for outdoor installation to ensure optimal signal capture. The assembly features a precise configuration of reflector, driven element, and multiple directors for superior signal gain and directivity.

## Technical Specifications

### Materials

- Metal rods
- Central support boom

### Mounting Location

Outdoor

### Design Components

- Reflector
- Driven element
- Multiple directors

### Frequency Bands

VHF, UHF
