

Yagi-Uda TV Antenna

The Yagi-Uda antenna is a directional antenna used for television signal reception. It consists of multiple parallel elements including a reflector, a driven element, and one or more directors for high gain.

Product Overview

Professional Yagi-Uda Directional Antenna

The Yagi-Uda antenna is a high-performance directional solution specifically engineered for reliable television signal reception. Featuring a robust configuration of reflectors, a driven folded dipole element, and directors, this antenna ensures high gain in the forward direction. Its lightweight, durable construction makes it an ideal choice for outdoor mast mounting to optimize reception quality across specified frequency bands.

Technical Specifications

Key Elements

- Reflector
- Driven element (folded dipole)
- Directors
- Central boom

Antenna Type	Yagi-Uda (Directional)
--------------	------------------------

Application & Build

Primary Use	Outdoor, Television Reception
Material Construction	Lightweight metal tubing and rods
