Product Overview

High-Performance Rear Wheel Rim

This lightweight motorcycle rear-wheel rim is engineered from high-quality aluminum alloy to provide optimal strength and reduced weight. Featuring advanced flash butt welding technology, it ensures a seamless construction without visible weld marks. Designed for enhanced handling and dynamic shock absorption, it offers reliable performance for various motorcycle types, including off-road and luxury models.

Technical Specifications

Key Features

- Lightweight construction
- High-hardness special elastic materials
- Dynamic shock absorption
- Seamless weld-free appearance

Material Composition	Special aluminum alloy profile
Manufacturing Process	Flash butt welding
Available Colors	Red, Silver, Black, Blue, Gold

Quality & Logistics

Quality Assurance Standards

- 100% incoming quality control
- 100% mass factory inspection
- Production according to technical standard drawings

Packaging Options

Neutral packing • Color box • Customized box

Service Capabilities

Service Area	Description
R&D	Technical team for rapid development and quoting
Sales	Professional support for customer communication
Logistics	Warehouse quality checks and packaging
