

# Yarn Twist Testing Machine

The yarn twist test machine is designed to determine yarn twist in single or plied yarns. It features adjustable clamps and a digital display for precise twist measurement readings.

## Product Overview

### Precision Yarn Twist Analysis

This yarn twist testing machine is a professional-grade instrument designed for the accurate determination of twist in both single and plied yarns. It utilizes a reliable quadrant-type testing mechanism with automated stop and reverse functions for conventional or untwist/re-twist test methods. Engineered for both research and industrial textile quality control, this device ensures consistent and high-precision measurement of yarn properties.

## Standards Compliance

### Certified Standards

ASTM D1422/1423, BS 2085, DIN 53832, ISO 2061, IWTO 25-70, GB/T 2543.1-2001, GB/T 2543.2-2001

## Certification

### Quality Certifications

CE Certified • ISO 9001:2000 • SGS Approved

## Technical Features

### Operating Methods

- Conventional twist testing
- Untwist/re-twist method
- Automatic stop
- Automatic reverse
