

Yellow-Green Heat Shrink Tubing

This heat shrink tubing features alternating yellow and green stripes. It shrinks when heated to provide a secure fit around wires, cables, and connectors, offering insulation and protection.

Product Overview

Versatile Insulation and Identification

This heat-shrinkable tubing features a distinct yellow-green striped pattern, specifically designed for clear identification and electrical insulation. The material provides a secure, tight fit around wires, cables, and connectors when heat is applied. It is an essential component for electrical projects requiring color-coded safety standards and reliable environmental protection.

Technical Specifications

Core Applications

- Electrical insulation
- Wire protection
- Connector sealing
- Color-coded identification

Standardization

Safety Color Coding
