

# Yellow Insulating Foam Component with Cylindrical Opening

This is a yellow insulating foam component. It features a cylindrical opening at one end and a rectangular tapered body.

## Product Overview

### Professional Insulation Solution

This yellow insulating foam component is precision-engineered for applications requiring thermal insulation or sound dampening. Featuring a distinct cylindrical opening, the part is designed to facilitate airflow or serve as a structural channel within equipment assemblies. Its specialized material construction makes it a reliable choice for protecting sensitive electronic components or managing acoustic environments.

## Technical Specifications

Material	Insulating Foam
Color	Yellow
Design Features	Cylindrical Opening, Tapered Body, Thermal Insulation, Sound Dampening

## Application Data

### Primary Applications

- Electronic equipment housing
- Computer peripheral cooling
- Airflow management
- Acoustic protection
