

Yellow PVC Positive Pressure Ventilation Duct

This ventilation duct is made of fire-resistant PVC fabric, suitable for temperatures between -20-80 . It features a rope and end ring for easy connection.

Product Overview

Professional Positive Pressure Ducting

This high-performance PVC ventilation duct is engineered for reliable air supply and exhaust in confined or poorly ventilated industrial spaces. Constructed from fire-resistant and oleic acid-proof fabric, it offers a versatile temperature range for demanding environments like tunneling, ship maintenance, and municipal sewer servicing. Its lightweight, foldable design ensures rapid deployment, easy transportation, and compact storage for field operations.

Technical Specifications

Operating Temperature	-20 to 80°C
Diameter Range	120mm - 1500mm
Standard Lengths	5m, 10m
Material Characteristics	Fire-resistant, Oleic acid proof, Lightweight

Commercial Details

Payment Terms

- 50% deposit
- 50% balance before shipment

Minimum Order Quantity	100 PCS
------------------------	---------

Applications

Primary Applications

- Municipal sewer servicing
- Underground cable maintenance
- Tunneling and subsurface repair
- Welding fume extraction
- Confined space ventilation (ship holds, crypts, storage)
