

YSZ07 Vibratory Roller Compactor

The YSZ07 vibratory roller is a compact machine for soil compaction and asphalt paving. Its drum delivers high-frequency vibrations, providing optimal compaction on various surfaces.

Product Overview

Versatile Compaction Power

The YSZ07 Vibratory Roller Compactor is a high-performance machine engineered for efficient soil and asphalt compaction. Its compact design and maneuverability make it perfectly suited for narrow ground and small to medium-sized construction projects. Featuring mechanical transmission and reliable vibration drives, this equipment ensures high-frequency performance and long-lasting durability in demanding work environments.

Technical Specifications

Compacting Force

2 t

Max Compaction

Transmission System

Mechanical moving transmission, Shake vibration drive

Vibration Type

Vertical vibration

Operational Features

Key Capabilities

- High efficiency performance
- Narrow-ground accessibility
- Includes transport cart
- Compact and durable design
