

YZD6C Oscillatory Roller

The YZD6C oscillatory roller is a construction machine designed for soil compaction. It features a smooth drum for efficient surface leveling and compaction.

Product Overview

Professional Compaction Performance

The YZD6C Oscillatory Roller is engineered for high-performance compaction across highways, municipal projects, and sports grounds. Utilizing a specialized oscillatory drum, the machine maintains constant ground contact to deliver horizontal vibration, ensuring rapid and uniform compaction. With integrated hydraulic steering and a robust articulated frame, it offers superior maneuverability and efficiency for demanding infrastructure sites.

Technical Specifications

Maximum Compacting Force

13 t

Compacting Force

Operational Systems

Hydraulic Vibration, Hydraulic Steering, Hydraulic Shake, Articulated Frame

Maintenance and Utility

Drum Equipment

- Integrated Scraper
- Sprinkling Device

Applications

Suitable Projects

Highway Construction • Municipal Work • Parking Areas • Sports Grounds
