

Zinc-Plated Steel Door Latch with Keyhole

This heavy-duty door latch mechanism is constructed from zinc-plated steel, featuring a robust sliding bolt design for secure locking. The assembly includes three countersunk screws for flush mounting, ensuring a clean and professional installation.

Product Overview

Heavy-Duty Security Solution

This zinc-plated steel door latch offers a robust and secure locking mechanism designed for high-use environments. Featuring a reliable sliding bolt design and integrated keyed access, it provides enhanced security while maintaining ease of operation. The construction ensures long-term durability and resistance to corrosion, making it an ideal choice for professional-grade door hardware installations.
