

Zirconium Flap Disc Grinding Wheel

Zirconium flap discs are grinding wheels made with overlapping abrasive flaps adhered to a backing plate. These discs are designed for aggressive stock removal, blending, and finishing on various materials, including steel, stainless steel, aluminum, and other metals.

Product Overview

Professional Grade Zirconium Flap Disc

This high-performance flap disc is engineered with 80% zirconium oxide, providing exceptional durability and aggressive stock removal capabilities. Designed specifically for stainless steel, alloy, and carbon steel, it ensures consistent finishing results across demanding metal fabrication applications. The overlapping flap design offers a cushioned grinding experience that minimizes chatter and prevents surface gouging during operation.

Material & Performance

Zirconium Oxide Content	80 %
Compatible Materials	Stainless Steel, Alloy Steel, Carbon Steel

Applications

Primary Applications

- Weld grinding
- Deburring
- Surface preparation
- Stock removal
- Blending
